Continuation of 2. NOTE: New Claims 27-45 would require further consideration because the claims do not precisely correspond to Claims 4-22. Claim 27 recites only that the method detects the first and second designation positions (see Line 12), without specifying that the pointer is first radially moved to the first designation position (see Claim 4, Lines 7-8) and that the second designation position is where the pointer is located after being moved circumferentially from the first designation position but before being returned to the reference position (see Claim 4, Lines 8-10).

Continuation of 5. does NOT place the application in condition for allowance because: Claims 23 and 26 read on Royer et al., U.S. Patent No. 4,872,196.

Also, the language of Claim 23 is indefinite as explained in the Office Action dated 12 March 2004. Applicant essentially admits that the claim is indefinite by stating that the values of "M" and "N" have "no specific value" set forth in the claim. As currently worded, the scope of the claim cannot be determined.
